

MineMaze Player Rules

Minemaze is a blind maze automation challenge. Each player target enters a private maze, explores it with limited visibility, collects the required keys, opens the matching doors, and reaches the exit before time runs out.

The map is different every round.

Objective

Escape the maze and receive the target flag.

The flag is awarded only when you reach the exit cell after completing the required lock-and-key path.

Starting a Run

Use:

```
/startgame
```

To end your current run:

```
/leavegame
```

Keys & Doors & Exit

The maze contains multiple locked doors and matching keys.

- Keys are found on colored marker blocks.
- A door can only be opened after you collect its matching key.
- Doors open automatically when you approach them with the required key.
- The action bar shows your key progress and remaining time.
- The key is made up of wool (for example, `minecraft:red_wool`) blocks in eight different colors: red, blue, yellow, lime, magenta, orange, cyan, and pink. The door is made of concrete blocks in colors that match those above. (for example, `minecraft:red_concrete`)

Example action bar:

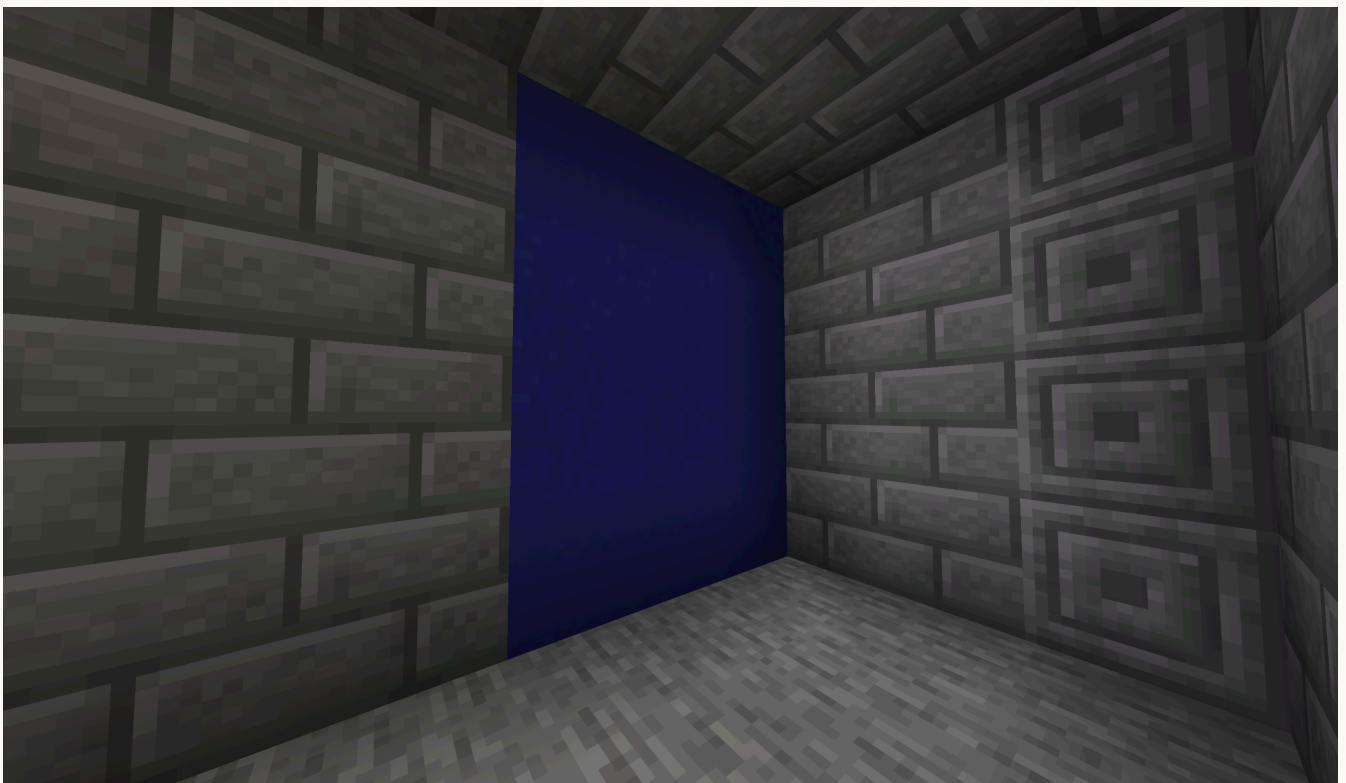

The exact number of required keys depends on the event configuration.

Door

Exit

Time Limit

Each run has a fixed time limit. If the timer reaches zero, the run ends and you must start again. You must complete the maze challenge within **3600** seconds.

Run Failure Conditions

Your run ends if any of the following happens:

- You run out of time.
- You die.
- You disconnect.
- You leave the maze boundary.
- You use **/leavegame**.

After a run ends, there may be a short cooldown before you can start again.

Command Restrictions

During an active maze run, normal players may only use:

/leavegame

Other commands are blocked while the run is active.

Winning

When you reach the exit after satisfying the required key and door sequence, the server sends your flag in chat.
